

## MoonTrust Platform App

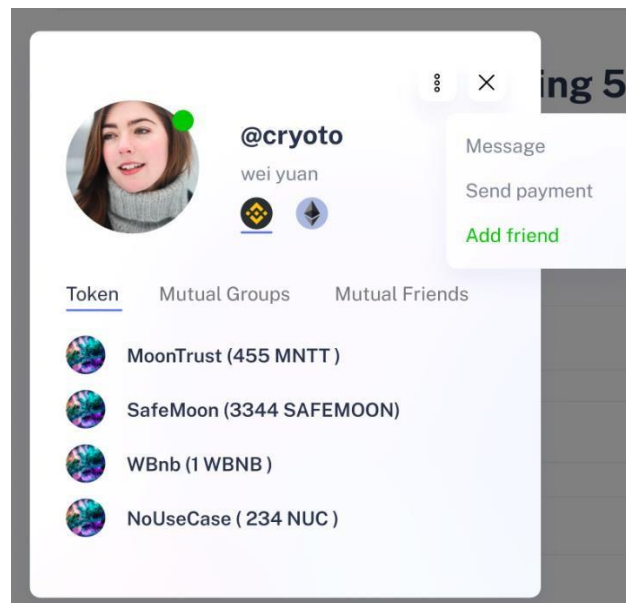

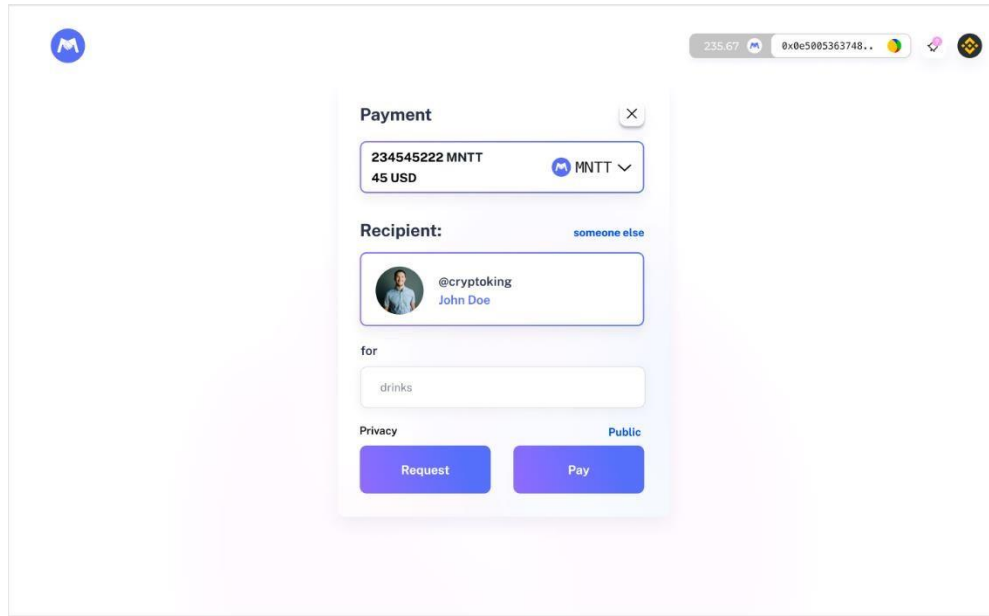

Just this year alone, tens of thousands of tokens were created. Majority of these token communities were built through Telegram and Discord. Often when new potential investors join these communities, they are misled by the information within the chat channels. This is done by employing bots to hype the project and create traction. Some also employ real humans as moderators who do not even own the token themselves. Therefore MoonTrust team build this platform, to enhance the community by making sure everyone is fully transparent with each other and remove any friction that is preventing crypto from being adopted to mainstream

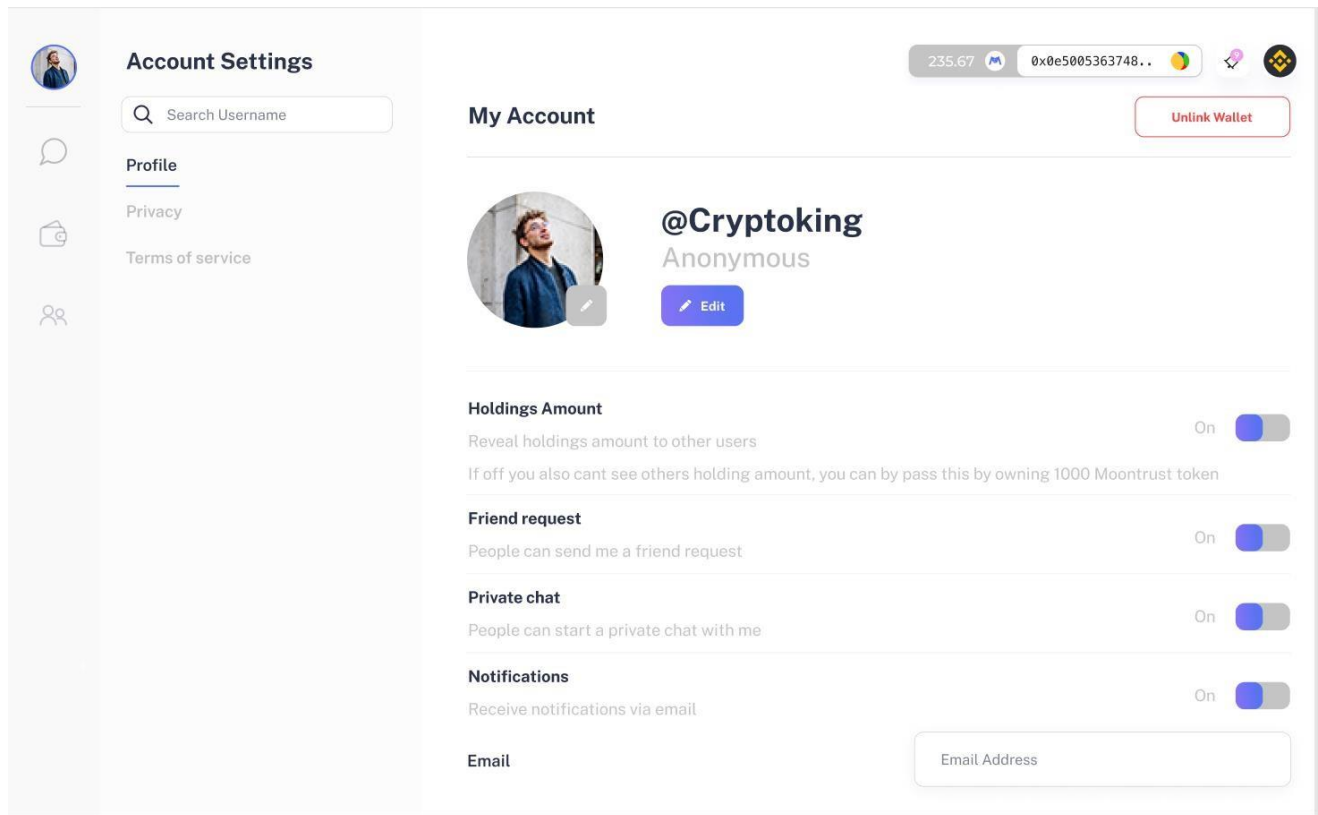

MoonTrust platform features token chat channels that only allow token holders to chat in the channel, and it will show the actual holding amount at the time of the message.

In MoonTrust, when transferring tokens between friends, you no longer need to remember their long painful address. Simply find your friend using their unique username and send or request as you would just like Venmo. Also, you can find common token holders and add them as friends.

Lastly, at Moontrust, there are also privacy options.

MoonTrust hopes to bring together true believers of their specific tokens and connect them with other real holders. MoonTrust also welcome influencers looking to interact with their fans by creating their own tokens.

## What is MoonTrust Token?

MoonTrust (MNTT) is a token on the Binance Smart Chain (BSC). The current token contract address is: 0xe9406b73d4f54572e27d60479905723de08e689e. We chose BSC because of lower gas fees in comparison to ETH. The MoonTrust team aims for this token to be community driven so the mechanisms and features of the token are designed to help with the long-term growth of the project. MNTT tokens will be used as an utility in MoonTrust Platform. Not only are MNTT tokens are required to join the MNTT group chat channel, it is also needed to access privacy features and other upcoming premium features. MNTT is also a tax-based token with increasing tax brackets based on the amount in a transaction.

## Why Tax Brackets?

Token Transaction Amount	Tax
<1k	No tax
1k-10k	1%
10-100k	2%
100k-500k	4%
500k-1m	5%
1m-10m	7%
10m+	10%

Our goal is to make the MoonTrust token a practical option for everyday transactions, so transactions that are less than 1000 tokens will not be taxed. An increasing tax structure exists to encourage day to day transaction, and also to obtain revenue from largest holders.

# Tax System

The 50% of tax goes to MoonTrust Tax Wallet. This is a team-controlled wallet. MoonTrust team will use the tokens from this wallet to fund operational expenses, maintain liquidity between DEX and CEX, development of project, and marketing expenses.

25% of the tax is automatically burned. This is to decrease the token supply over time. The rate of decrease is dependent on trading activity.

25% of tax is automatically added to the staking contract. Holders can stake their MNTT tokens to receive this share of tax revenue. The amount gained is directly proportional to amount of MNTT staked in respective to total MNTT staked, as well as total amount of MNTT gained from tax.

# Staking

Holders can stake their MNTTBSC tokens to earn more tokens. Staking process is waived from the original tax (tax free). As such, there will be a 0.5% withdrawal fee to discourage short term staking during high volume trading and/or breakout events.

# Tokenomics

**MoonTrustBSC** is an upgrade of 0x390037d710c86f88f05174599425b77c72eda305 token. The supply has decreased from 1 trillion to 694.2B billion. The decrease comes from combination of burning MoonTrust Team wallet and already burned tokens.

At launch, 30 billion and 100 bnb will be listed into PancakeSwap as liquidity. The LP tokens will be locked.

Holders of old token 0x390037d710c86f88f05174599425b77c72eda305 can upgrade into new MoonTrustBSC token via an exchange process. Details are within the app channel.

**Note:** Old token address liquidity was removed from Pancake V2. This liquidity is to fund the initial PancakeSwap listing liquidity.

## Token Utility

Token utility are used for the following features with more features to come in the future:

- Creating custom groups
- Can still view other user's token holding amount while having privacy option on (similar to Linked). Note: you still cannot view an user who has their privacy option on
- Creating polls (you can still vote without MNTT)
- Triggering ban vote (you can still vote without MNTT)
- Mute functionality
- Unlocking monthly premium channel boost

## Roadmap

### 2021

March – DxSale fair launch

April – Coingecko and CoinMarketCap listing

May – Partnership announcement

Q3 – Exchange listing, MoonTrust V1 Prototype

Q4 – MoonTrust V2 App Launch (payment + social + chat features)

## 2022

- **Q1**
  - Feature Enhancement
    - ✦ Staking
    - ✦ Governance / Moderation
    - ✦ Other community requested features
- **Q2**
  - Determine which additional chains to launch MoonTrust on
    - ✦ Potential chains in consideration: Polygon, ETH, xDai, Cardano, Solana, Avax
- **Q3**
  - Development of MoonTrust to launch on the chosen chain
- **Q4**
  - Launch MoonTrust on the chosen chain

## 2023

- **Q1**
  - Feature Enhancement
    - ✦ Community requested features
  - Marketing Campaigns
- **Q2**
  - Determine which additional chains to launch MoonTrust on
    - ✦ Potential chains in consideration: Polygon, ETH, xDai, Cardano, Solana, Avax
- **Q3**
  - Development of MoonTrust to launch on the chosen chain
- **Q4**
  - Launch MoonTrust on the chosen chain

We aim to launch MoonTrust on at least one new blockchain per year. The goal is to launch MoonTrust on every chain, so users can have a community to discuss all their favorite alt coins.
